Computer Information Systems: Question 1

Was there a specific course (or courses) you considered more valuable than others?

* I thought Capstone with Jack Fassel was really helpful. I sort of wish it was a little longer.

* Cisco Courses

* The only course with literally any value at all was the course pertaining to Python. That's IT!

* In terms of faculty, I would say that specific instructors are more valuable than others. The courses taught by Paul Morris and Wayne Machuca were far more engaging, interesting, and retainable than the other classes taken as required by the Certificate program I completed.

* The HTML class and the Javascript classes were great

* ISTM283F, the A+ classes,Computer Security classes (but I would have preferred another program instead of Testout), the Windows Server class, the Novell server class, etc...

* Python class

* Cyber security

* Python

* Routing and switching courses, (CIS151, CSI152, CIS154) are used often.

* Cis145a-c,   cis154, cis240 cis197

* All of the web design classes were helpful in doing this side work. The graphic art section was most used during this project.

* Cisco networking courses

* All the classes were equally valuable in there own way.

* CIS 154CIS 151MTH 065CIS125 Spead sheets

* Computer forensics classes

Computer Information Systems: Question 2

Are there any new tools, applications or standards the program should address?

* He's recovery, data recovery

* More advanced scripting and PHP classes would be helpful.

* Nothing that i can think of. the program I was in was great.

* More hands-on.

* Networking devices, web development, firewalls . Configuring vpn services .

* I feel that the curriculum (tools, applications, and standards) is relevant to today's professions (as of completion in July of 2017).

* You should be teaching students about SERVERS. It is not a required class. Don't you think a web designer should understand how a to use a server?

* Entrepreneurship class was very useful. Create your own opportunity.

* Routing and switching hardware OTHER than Cisco.

* The finding and removal of viruses could be very helpful for students that may not go far in the degree but may work at BestBuy or something in that line.

* Windows 10, cloud technology, smart phones and other devices connected to each other, virtual technology, add public speaking classes since people in the IT industry need them to communicate with other people besides using technology to communicate and the Bachelor's programs require speech to graduate from their own program, also maybe add Calligraphy since that's a dying art and its needed in real life as well. And maybe not rely so much on CISCO networking, since there are other networking companies out there and networking can be learned by Googling and using YouTube.

* Blockchain technology! It's so obvious. How is any tech student going to code in the future without any tools in blockchain technology?! I'm certain that everything I learned is either outdated or about to be.

* VMWare, Citrix, VPN Palo Alto Equipment

* I kind of wish you could take Capstone during your first year, or maybe fall of the second year when so you could use those skills to find a job while you are still going to school. I didnt really start looking for a real job till after I graduated.
